On The Cover

Brian is one of several regulars at the Peachtree Express clinics who have helped their peers build the railroads we see here. ● A Georgia native in our 50 States tour, he also is an avid model railroader who specializes in the Southern Railway. Brian's modeling skills have been honed by years of building and operating on his home layout. Brian's expertise has been tapped by the Peachtree Express Clinic Committee for their annual clinics. Brian's layout, seen on page 12.

Brandon Barnes, MMR/Publisher

Acrylic Buildings

I have spent the last few days building a couple buildings made from acrylic. I picked up these kits at the NMRA National Convention in Grand Rapids and was eager to build the unique and interesting buildings. The structures, made by Custom Model Railroads, are laser cut from a variety of thicknesses and types of acrylic. Lesson learned: that I have had a lesson here to work with this "new" material.

I usually work with styrene. I can tell from you, anyone's strengths and weaknesses, and that love to use kitbash structures into new and bright and using this material. Acrylic, on the other hand, exhibits very different properties, neither good or bad, just different. First, acrylic is a very hard material that can become brittle if improperly designed. The hardness also makes the material a little more difficult to cut and work. Unfortunately, during my first few attempts to cut and work with the acrylic, I have made a few mistakes. Fortunately, these mistakes were inexpensive to repair. However, since you gotta hang out working with acrylic, it's a cool! It is very stiff and does not warp or bend. Because of this property, you can use very thin material to for your walls and details.

One of the key I am building has been cut for proper glue fit. Some of the parts were thought would not be strong enough. This detail cannot be cut to tolerance every time, I have. The material does not take to glue and is adhered by a solvent system. Solvent cement literally melts the two pieces together and then

Observation Car

evaporates, leaving a strong joint. Acrylic is almost impossible to get a good joint glued and will cause likely break rather than separate at a joint. That, in all cases, the cause of separation.

Acrylic takes paint very well, and I have had no problems using my airbrush and Scenic Express Acrylic paints. I have just about completed both the power plant and hotel. Other and later, I am glad that I took the chance and tried working with a new material. There are any premium buildings and will look forward to my next. Lenore.

Making Progress

the same chances as the magazine, but would offer some consolation to our members. It would not be offered at the same frequency as the magazine. These proposals are still in the formative stage, and I'll keep you up to date on them as we go the road.

You heard that Midwest Division is desirous sometime to develop a computer-based Education and Training Program under the Education Department of John Lawrence. Approved as a concept by the Board of Directors, Jim will present a formal proposal for this program at the next board meeting, and we will share the details of this exciting and innovative television program with you in the future. A couple of comments in response to issues that are already evolving. This program is not intended to replace local initiatives now in existence. Rather, it is an important and professional tool that we will be offering to Regions and Divisions to assist them in presenting shows or other educational materials to members. Jim and his crew have the enthusiasm, experience, and resources to provide a stunning arsenal of tools that can be utilized to improve our educational efforts. I am very excited about this development.

Progress is also being made on other technological horizons such as VGBBS. Moreover, the commercial press has begun to notice the existence of "points on board," which is a revolutionary new technology allowing radio controlled DOG battery-powered locomotives to operate without mechanical connections. Sometimes referred to as "DroidRail Issues," this new technology promises a freedom of operation unknown since the steam days. This technology is now driving the model railroad industry here in Silicon Valley, where it has used by the manufacturer and improvement in human technology. Already, wireless charging stations are undergoing through dedicated track sections is possible. At the appropriate time, the NMRA will address standards for this new technology, but distinguish between standard for the NMRA, and its relevance in a dynamically changing hobby.

Under the able leadership of marketing professionals Page Morris, Connie Arnold, and Bonnie Johnson, we are exploring innovative ways and programs to increase our membership and outreach to the hobby community. We will be introducing some very exciting ideas and benefits as a result of their efforts and others.

So, we are making progress. We have opened new divisional volunteer opportunities in the NMRA, new hobby, and now, have issued five updates on plans and other exciting developments.

In other news, our Executive Director Lindsay Haskell is pursuing other opportunities. Bruce did some great work for us, and we wish him well. Director vacancy will fill in the future for now.

I thank you for the overwhelming positive response to my first editorial. One reader did take me to task for having "misspent" my retirement years. Well, hopefully you did not think so for now, there's no money issues. Well, enough for now. As always, drop me any thoughts what are yours!

Brandon Goodbrod

[illegible] Memorial Day [illegible]

Many thanks to [illegible] for his work with surface mount. Current Limiting Diodes (CLLD). The CLD83 [illegible] was added at the last minute to give a discrete alternative to the surface mount device. The CLD83 still uses resistors (like the pulse) as opposed to 'a diode' [illegible] and '-' don't change dimensions. I mean to write [illegible].

[illegible] article from [illegible] and using various CLDs. If you want:

180mA = 1SD06-[illegible]-T1G
240mA = 1SD-[illegible]-T1G
330mA = 1SD-[illegible]-T1G
500mA = 1SD-[illegible]-T1G

The above are designed about the CLD20 Diode. All these are surface-mount devices and 'WILL' work in a Bright scope. They are available from www.onsemi.com or www.digikey.com. If you need other milliamp values these diodes can be paralleled. The CLD20 has been used in my Dark Power Series motherboard for an ED-DC wireless problem. See Figure 6.

Again, sorry for the misinformation on the CLD83.

Steve Sanders

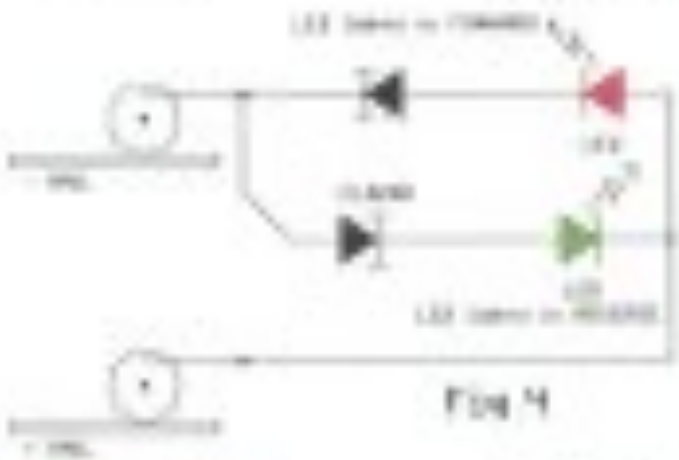

Figure 6

[illegible] Project

Thanks to M. B. Smith for a great article! His "Creating Realistic" article [illegible] give me the inspiration and courage to try [illegible]. Without Cass Benning and Structural Modeling [illegible] I would not have [illegible] Woodland Scenics [illegible] with two separate pours over the plastic [illegible] and another mold for bricks and flat roofs for shipping. Finished product [illegible] by cutting the larger buildings in half lengthwise and painting the inside and wall of the smaller building. I have a rubber lamprell. A few roll up doors and a couple of personal doors are [illegible] long wall mounted [illegible] plenty of room, and the little utility trailer is now parked [illegible] at the gate. I will be adding a few [illegible] rails to strengthen the walls overlooking space and various wood types. The [illegible] are here to [illegible] for [illegible] adventure, all because of his article!

John Cuffy

Port Townsend, Washington

The Famous [illegible] Number 9

Congratulations to Charles Gatewood, [illegible] Charles is a dynamic and intelligent leader who has made many contributions to NMRA in the Pacific Coast Region and to the NMRA at both the national and international level. His [illegible] in the September issue of NMRA Magazine are informative and present goals for growing the organization and the [illegible] NMRA's leadership role in railroad modeling.

In the Mail Car column of that same issue was a letter from a fellow member who raises some [illegible] concerning the need for and the future of our organization. I think it is important to ask these questions — and keep asking them — for in answering these questions we help shape our future and what we do, and what changes we need to make to remain relevant in a rapidly changing world.

It is important to realize that an organization's environment can change everything around it changes. It is also important to recognize that many of these changes which imply the existence of the organization [illegible] in the first place are values which should be retained or other facets of the organization change.

I look forward to Charles's leadership in addressing these issues as the [illegible] forward.

Don Paugh, [illegible]

Will the [illegible] be [illegible]?

Good question and [illegible] thing that I have in mind about this topic. The [illegible] in Birmingham, Alabama, we [illegible] another [illegible] every [illegible] year.

But trying to answer the [illegible] ground [illegible] the management experts. Dr. Stephen Covey, author of many books including Seven Habits of Highly Effective People, Dr. Covey [illegible] is retired because of one of his [illegible], is the [illegible] at the beginning of any project:

"Begin with the End in Mind"

I believe that many of us [illegible] do that very thing, at every [illegible] and every [illegible] — they begin with the end in mind — the End of the Hobby! In my [illegible] I will [illegible].

I enjoyed reading the [illegible] in the September issue of NMRA Magazine, including two points of view. One [illegible] stated we need [illegible] "to our hearts" and [illegible] to [illegible] [illegible] [illegible] and [illegible] [illegible] and [illegible] [illegible] [illegible]

[illegible] [illegible] [illegible] [

NMRA 2013 Peachtree Express

National Convention Facility and Hotel

text and photographs by Dave Goodfellow #4400

Atlanta, Georgia, and the Northeastern Region's host Piedmont Division look forward to welcoming you to "Peachtree Express" the 2013 NMRA National Convention July 6th-14th.

The Convention Facility

The convention facility is the Cobb Galleria Centre located in Northwest Atlanta outside downtown at the intersection of three major highways: Interstate 75, 285, and Cobb Parkway (U.S. 41), and just 20 minutes from Atlanta Hartsfield-Jackson International Airport. Opened in 1994, the Cobb Galleria has 220,000 square feet total of exhibition halls, meeting rooms, and a ballroom. Its exhibition hall has 2,000 free parking spaces.

Conveniently located on several great attractions, the Cobb Galleria is directly connected to the convention's Renaissance Waverly Hotel, a first-class Marriott Resort. Complementing the many shops Galleria specialty shops, a pedestrian bridge connects the Centre to Cumberland Mall, a newly expanded Mecca for shopping enjoy additional upscale shopping and dining experiences. Here in 2007, the state of the art Cobb Energy Performing Arts Centre is located close by. The bridge also connects to the 2,750 room Sheraton Suites Galleria Hotel and the 260 room Embassy Suites is within walking distance additionally there are more than 30 hotels and motels within a 10-mile radius surrounding the Galleria.

Cobb Galleria Centre, Two Galleria Parkway, Atlanta, GA 30339 Tel. 770/955-8991, www.cobbgalleria.com

The Convention Hotel

The Renaissance Waverly Hotel is the main hotel for the 2013 NMRA National Convention. It's located in Atlanta's Cobb Galleria neighborhood, close to the Cobb Energy Performing Arts Center, Cobb Galleria Centre (cobalt holiday walk), and Cumberland Mall as a connecting pedestrian bridge. Additional entertainment options include Atlanta Falcons Stadium and the Georgia Governor's Mansion.

The hotel contains an extensive lobby bar and dining area. Room service is available during lunch and dinner. Recommended amenities include

an indoor pool, a health club, a spa with a sauna, and a fitness facility. The property's full-service health spa has body treatments, massages, manicures, pedicures, and facials. This 4-star property has 24-hour service, valet, concierge service, and dedicated meeting rooms, a meeting conference center, and audio visual equipment. High-speed Internet access is available in public areas. Wet behavi-

CUMBERLAND
MALL

NMRA 2013 Peachtree Express
Clinics

Plans are underway for an excellent clinic program at the Peachtree Express NMRA National Convention in Atlanta July 14-20. Clinics will be divided into four main categories, General Interest, Prototype, Historical, and Technical. It is our intent to have a well-rounded program with comprehensive representation of clinics in each of these categories.

Narrow and standard alike will find clinics dealing with basic as well as more advanced techniques for both layout and model construction. Novices in the hobby will learn how to operate or improve upon basic switching skills. Operators will learn about the latest materials and how to use them. There will be something of interest for everyone.

Additionally, there will be Civil War clinics presented by renowned historians from the Southern Museum of Civil War and Locomotive History in Kennesaw, Georgia, suburb of Atlanta. Civil War is of special interest to many attending the convention, and these clinics are an excellent opportunity to learn more about the war in and around our city, the very site of some of the most famous battles.

For those who enjoy prototype clinics, several excellent clinics will be given by well-known clinicians from several of our Special Interest Groups. They will discuss the intricacies of prototype railroading and how you can introduce a higher degree of fidelity to your railroad models as well as adequately operating and improve your model railroad.

If you like model railroad gadgetry, look for clinics (many "under and take") designed for the more technically interested. These clinics will show you how to build and bring animation to your layout. Find out just how easy it is to add LED's, sound systems, your layout, to your model railroad system.

Some of the Master Model Railroaders who clinked their experience are Jerry Ambler, Bob Berry, Jim Beatty, Ron Clough, Jerry Dale, Mike Dale, Jack Davidson, Tom Dumas, Pat Hennessy, Clark Kooning, Paul Lasher, Jim Nichols Sr., Stephen Priest, Paul Richardson, John Roberts, Larry Smith, Ed Stan, Bob Weatherman, Al Westerfield, John Wilkins, and Brian Youngblood.

Other nationally known presenters scheduled are Bill Donnelly, Steve Hansen, Charles Carey, Jesse & J. Ormand, Bob Janz, Bernard Kempinski, Tony Koester, Harold McGee, Lance Mindheim, Bob Nicastrom, Jim Sayre, Ken Schlottfeldt, Jim Six, Jr., Bruce Smith, Marc Stevens, Mike Tylick, and Thomas Yorke.

"BOT Starts a "Modeling What's the Matter" series hosted by Clark Kooning and other MMR's. There "somethin" else to feature a variety of "hands on" clinic participation. Class size is limited, so be sure to watch the website for information about the MMR Clinic program and how to enroll. Several "Super Clinics" may be given – "Inspector Super Clinic" are also planned.

Also scheduled in the clinic program are some very valuable presentations you may not have heard of, but will be talking about after you learn. With more than 120 clinicians giving clinics there will be more than 1,000 different clinics! Presently, clinics are scheduled for Sunday, July 14 from 1:30 – 5pm and 8:30-12noon, Monday through Friday from 8am-noon, 1-4:30pm, and 7-10pm, Saturday July 20 from 8:30a-noon. For periodic updates on the schedule, go to www.nmra2013.org.

Creating an Award-Winning S Scale Display Layout

article by [illegible] and photographs by [illegible]

The Southeastern Michigan S Gaugers (SMSG) is a club in the greater Detroit area, consisting of modelers, collectors and operators in S scale. We recently completed a significant upgrade to our portable display layout, and the process and the result might be of interest to modelers in all scales.

The SMSG Layout

From the outset, we designed the club layout primarily to showcase what's currently available in our chosen scale. While I continue to be a staunch scale component (with AC), N, and O, a surprising number of manufacturers — locomotives, rolling stock, structures and decals — have come to the market to secure space. As shows where we have set up the SMSG layout, we frequently hear comments about the size balance. S offers a good point on and size between the two most widely large. We often hear variations of "I would consider switching to S if only I didn't have so much already invested in 'X' scale." That said, many of the SMSG's current users (4 of 5 members) are converts from other scales.

Built as a shelf project, the SMSG layout has been displayed at shows and conventions for several years. Physically, it's a 16x30 horizontal, consisting of eight straight sections (each 3 feet, 6 inches long) and eight curved sections (with each 90 degree curve made up of two sections). Although all the sections had scenery, it was fairly basic. Therefore, a few years when the trustees were above the grade level of the benchwork, particularly rock and where sharp curves, we agreed should the layout was able top flat. Along with other small ghosts from the years, and we agreed removed shows a shows convenience that we would simply be sure to use from "point" during shows.

The Upgrade Project

In January 2012, the USGS coordinator tasked us with our display layout at the National State Show scheduled for the following August in Grand Rapids, Michigan. Held in conjunction with the annual USGS Symposium, the NFL-organized Grand Expo attracts 17,000 spectators. The challenge for members was for themselves was to significantly upgrade the layout in time for the show.

One first task was setting a vision for what we wanted to accomplish. Our newly-reinvented exhibit would showcase how our state's economy, natural resources, and society would be represented in a series of scenes that flowed from section to section, rather than the more typical modular approach where each section might be designed independently.

Since there is no club-owned facility available to us, we decided the optimal environment to accomplish this work was through distributed teams. Four members (Bill Bardon, Todd Carlson, Tom Blum, and I) volunteered their homes as work sites, and the layout was then divided up so that each one had defined, self-contained scenes at the transition boundaries. We designed assignments that could be done by many members, such as sculpting scenery or small accessories that members could do individually at home, such as building a miniature kit.

While distributed work seems like perfect opportunity to experiment the importance of developing some standards and guidelines. The team leaders collaborated to develop a material list that included numbers and sizes of scenery, vehicles, and figures. For example, we established specific numbers and types that we recommended, and emphasized the importance of neutral colors, consistency and weathering on structures. We further reinforced the standards by conducting demonstrations and training sessions for members. Bob Dobbins, who was the team leader, even created a "how to" for local projects so that others could create similar looking structures for us.

The teams ensured as much leeway as possible to develop site plans, create budgets, and schedule the work sessions. Each team was without state planners are often blindsided by

We had a lot of fun with the project, and it was a great way to get to know other members of the club. Although we had a lot of work to do, we were able to complete the project in time for the show.

Featured Structures

By the time we packed everything up and arrived at the National State Show the USGS team had accomplished a lot. In fact we surprised ourselves by finishing well before the deadline.

Above: Skyway Diner's replacement 1/2-in.-gauge steam locomotive is shown here crossing the layout's Rockwood Creek bridge, which was constructed from a kit. The model building has the characteristics of a prefabricated masonry structure, like one that was common in mid-century cities.

projects we had acquired, built, painted, and installed—all over again. About 90 percent of them were kit-built (mostly wooden ones), 10 percent were kit-bashed, and 30 percent were scratchbuilt. Concentrating once we started work, we were down to a total of 85 structures on the layout.

While we're proud of all our modeling work, many of the O&M structures are worth highlighting here. The brick depot we bagged at Train Station was not the most difficult structure of the group picked up at a train show — it was one of the original structures we couldn't let go during demolition from 1994 (wooden components in two other nearby structures had suffered deterioration to pass the 4 scale). We began our rehabilitation by cleaning up the wood that accurately duplicated the brick, and scraping off the accumulated soot. Then we replaced rotten wood, repointed the brick, repainted, and installed all new windows. About 90 percent of them were kit-built (mostly wooden ones), 10 percent were kit-bashed, and 30 percent were scratchbuilt. Concentrating once we started work, we were down to a total of 85 structures on the layout.

While we're proud of all our modeling work, many of the O&M structures are worth highlighting here. Then we replaced rotten wood, repointed the brick, repainted, and installed all new windows. About 90 percent of them were kit-built (mostly wooden ones), 10 percent were kit-bashed, and 30 percent were scratchbuilt. Concentrating once we started work, we were down to a total of 85 structures on the layout.

The favorite industry we called Vulcan Iron Works was another Lemco prefabricating 1/2-scale G1934 model (a components kit). Our lead carpenter, however, is adding his own touches, including a roofing, new windows, loading and unloading, plus several exterior details such as wall corner planes, smokestack, a rooftop water tank, various waste and exhaust lines, and electrical. While some of these components were manufactured in 4 scale, others were 1/2 scale, so we had to carefully research and build them. Other signs, weathering, figures and details really complete the scene. In the 1930s the Vulcan Iron Works and Evans station models were responsible for our club earning a coveted Kemper's award from Design Preservation Models for our attention to detail in structures.

Our back-alley structure we called Jerry's Service was essentially scratchbuilt. The walls are cut from a wooden picnic table, employing clapboard siding, while the garage doors are both from pieces of surplus styrene (Evergreen). The skylight windows were cut from plastic O-scale windowpane window castings. The brick platform and the weathered for the rear are 4 scale resin castings from Dave Cameron. The latter was a simply elongated 1/2-brick basic molding.

The peeling paint on the concrete walls was achieved by first washing the wood down in standard weathered wood, then applying washes on the paint with a brush using a stippling technique.

The Lewis Pub was another kit-built project. It started as a Bachmann Plasticville depot model, and since the O scale does not fit the standard-scale trains — only the front wall of the original structure was retained with everything else scratchbuilt. Its seemingly unfinished wooden framing throughout says to most engineering student to start exterior construction with a sign.

The Pub signage was applied all the interior and appropriate weathering applied with washes and fades. The result is a model of a substantial aged market, about 45 scale feet across the front, while the depth was increased about fifteen scale feet to accommodate a bar and restaurant.

PAINTED SCENIC ENHANCERS

Our upgrade project didn't focus only on structures, as we created many new scenic elements as well. For example, we expanded our backdrops, which had previously covered less than half the layout.

Above: One side of the HMRS Convention's original pictorial city, Kevin Hewitt's addition at the left showing building and its names in honour of club members. The backdrop is joined to the other buildings on the layout. The Backdrop Workbench backdrops enhance the scene.

from, nonetheless, each layer) and over the one showing the sight. The scenes containing Jerry's Cars are many steps deep to help the distance, with scenery on the surrounding terrain blended into a continuous look.

Of course, the number of new construction and the time it took to complete the project for us. Part of the upgrade project involved constructing special cradles and customized boxes each designed to hold a particular component during storage and transit. A numbering system for the components with their respective cradles and their packaging. These custom packs then go into several colored plastic tubs that work well together. The criteria layout, including the kit to store the logs, backdrops, and all

Riverside Coal Company

Highland, New York

words and principle photographs by Paul Mayo

drawings by Harold Russell, NMRA, overall photographs by Stephen Timmons

One of the great joys of being a railroad modeler is the opportunity to visit and get to know communities all over the Northeast. Often, the design process for a new building includes a study of the local environment in order to understand the architectural context, by exploring and observing historic buildings throughout the area. This in turn often provides an excuse to visit the various areas "down by the tracks." I've personally been fortunate enough to work for theaters in Warwick, New York (home of the Lehigh & Hudson River Railroad), Port Jervis, New York (a major facility for the Erie), Gardiner, New York (a stop on the Walkill Valley Railroad, NYC), Saugerties, New York (on the West Shore Line), and Gloversville, New York (on the Fonda, Johnstown & Gloversville). Even small towns often have at least some intriguing remains of industrial archeology, where railroad related architecture is concerned.

Over the past few years, while working on projects in the Lower Hudson Valley, New York, I came across a set of buildings so compelling and so indicative of the character of the small town 19th century world, that they absolutely had to be studied for that. Others, who're visiting scenes such a scenery, I take a few preliminary viewing photographs of a building or structure, returning to the area to conduct interviews over the details. Too many times, "later" ends up being after the structure has burned, collapsed, or been muddled with horrible additions or a new exterior that completely obscures the original character which was so evocative.

Company Owner

In this case though, the railroad architecture gods were smiling on me. I was signed an introduction to the generous and affable owner of this delightful, operational coal & lumber facility. Mr. Goldman, the family has been for many years, a very knowledgeable source of historic and general information about the coal business. Since I would do Lehigh & New England Railroad as it crossed New Jersey and New York in 1949, finding a prototype to the Northeast, this insight into the delivery coal of coal operations was priceless.

Location

The Riverside Coal Company in Highland, New York, was located on the New York, New Haven, & Hartford's Maybrook line, connecting the town's coal yards (including the coal docks of Poughkeepsie) to New England over the Mid-town Poughkeepsie Railroad Bridge across the Hudson River. The railroad Riverside Coal was the last step going east before crossing the bridge, and over the years accumulated freight of delivered initially from the Lehigh Coal & Navigation Company, and later from the Reading mines in Pennsylvania.

History

The first business on the property was started by Mr. Miller, who commenced his coal business in 1919–1927. People were so interested, apparently, in those days and Mr. Miller never carried a full set of the cost of the coal he had to run the business for many years. In that time, the delivery of coal was performed by: Purchasers drove horse, covered and horseless coal wagons. There wagons were driven up underneath appropriate bins. Mr. Miller then opened the doors, ran [illegible] through chutes to the floor. The work was done by the owner himself and his family and delivery was by, what I would call, early. At that time the large number the time, so which proved the chance was to added at the front of the bunker for transfer.

Mr. Smith's father, Richard C., bought, purchased the business from the Miller family around 1967. In 1993, after working in the family business since 1969, Jonathan Smith purchased Riverside Coal from his father and another generation of anthracite experience (including his wife, Linda, and kids) began. Our coal is now providing fuel to the Highland and Poughkeepsie area of Upstate New York. Until the Poughkeepsie Railroad Bridge burned in 1974, Riverside Coal still received deliveries by rail. After that, the anthracite business still was transported predominately during winter months but deliveries came by truck.

Bunker Construction

The pits supporting the bunker included brick timber and concrete timber construction. The timbers with pieces also have cable bracing digging into the timber beams. Apparently, during construction, the bunker was originally supported with the timber piers, which were found to be insufficient once loading was applied. The cable supports were employed as an emergency means of supporting the collapse. Just once the cable bracing was added to the timber, we built the concrete between the timber supports. Having already completed the cable at the north end, they were left in place. One could see this as a rather economic way to maintain the 40s bunker.

Coal Delivery

Coal was delivered to the bunker from the adjacent NYSW&RR railway, which operated a series of connecting railroads to allow the use of a standard railroad gondola to be dipped under the rails. The gondola was manufactured from heavy wooden construction with [illegible] and [illegible] to [illegible] the rubber tires and [illegible] the car from along the [illegible] and [illegible] with the rail [illegible] the railroad [illegible] the [illegible]. Because the wood and [illegible] was [illegible] all the way under the rail while unloading, a giant box [illegible] opened into the space with a shovel, pushing the coal into the conveyor from the opposite side. In the winter, we could find the top surface of the coal load in the hopper was a solid bridge. It [illegible] cover the rail beneath, [illegible] opened. Once again, the coal box was put to work, using a rail [illegible] to break up the [illegible] surface, preferably without falling to the bottom of the hopper. This was dangerous work indeed. On the north end of the bunker, a small shed was [illegible], holding [illegible], shovels, picks, pry bars, wood blocking, [illegible] working [illegible] bridge hammers, and [illegible] — [illegible] to unload a railroad hopper by hand in just a few hours.

The bunker weighs the load [illegible] on the scale [illegible] with [illegible]

This product received a Conformance Warrant

The Broadway Limited Rail returning the name to one of the most storied rail streets in conjunction with thoughts of luxurious first-class travel during railroad's golden years. Indeed, the Broadway Limited was Pennsylvania Railroad's premier passenger train operating over eight hundred miles New York City and Chicago via North Philadelphia and running at fourteen minutes and the stability Contrary to popular belief, the Broadway Limited name referred to the broad four-track mainline along much of its route rather than the famous theater district in New York City.

Inaugurated in 1912, the morning train from New York to the windy city was 20 hours. From 1912 until 1938, the Broadway Limited featured an extra fare, eight-car, all-sleeper heavyweight service. The mainstay were Pennsylvania by an open platform observation car. In 1938, Raymond Loewy designed new lightweight streamlined cars to replace the heavyweights. The revamped Broadway Limited was inaugurated on May 1, 1938, and featured a new observation car, a restaurant-dining car, and a railroad lounge car. The train departed New York at 4:00 P.M. and arrived in Chicago at 7:45 the next morning.

In 1967, due to the rising operating costs, Penn Central discontinued the Broadway. In its place, PRR introduced the Continental Limited and Broadway with the train name remaining the Broadway Limited. Conrail inherited the Broadway Limited name in 1976 and 1968. Some of the cars and locomotives are still in use on Wabtec as of June 30 it has been listed as "Discontinued when sold out" for the old saying "get one while they last" already applies. See www.wabtec.com for more information.

Issued Conformance Warrant 2013-019

Above: Walthers ships each car type in a specific paint scheme and road name. Separate packaging makes it easy to identify the correct car number for your train.

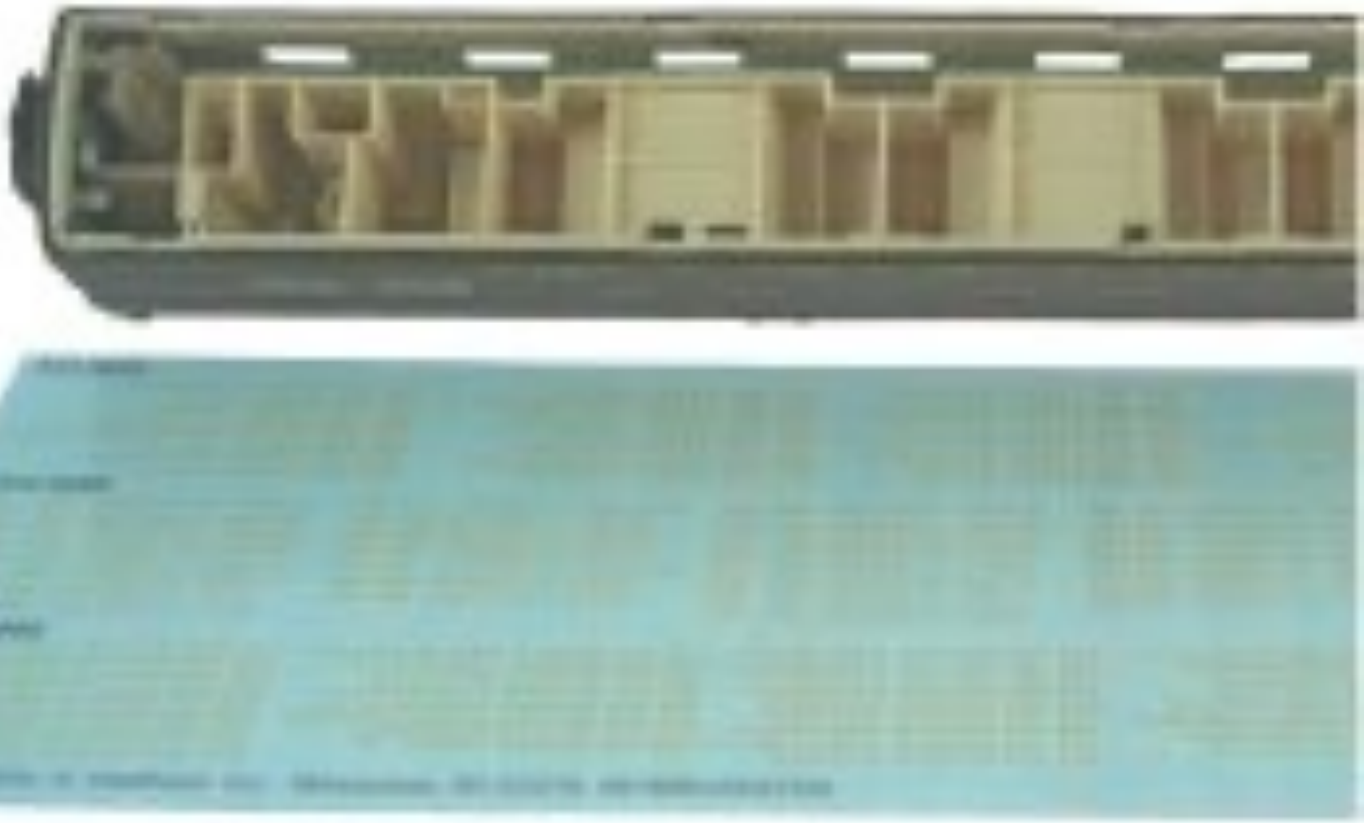
plenty. Also impressive are rack and pinion couplers that function as specified when coupling with other cars.

One unique sample is the Coral Sands 10-duplex, four-bedroom sleeper. The Coral Sands offered the most luxurious accommodations available on the Budd fleet. The duplex rooms featured a roomy lounge with chair-transformed bunks for eight, plus roomier multi-trade beds. The double bedrooms featured upper and lower berths, private lavatory and toilet, a sofa and seat, or lounge chair. The duplex rooms were always in high demand, and at least two Coral Sands duplex could be found in the private Ann Perry "Coral" cotton or the Chipman Coal railway cars today. Initially, the car was purchased by the Pacific Railroad Society, located in Los Angeles. A photo of this car can be found at www.pacificrailroadsociety.org/equipment/passenger/coral/coral.html. Later the Canadian Pacific Group of San Antonio, Texas, acquired the car, which can be seen at http://railroadsandsteam.com.

The Walthers model is available separately now while Pacific passenger trains ended in 1956. The name-brand Tuscan paint and stainless gold striping are excellent. The manufacturer's factory-installed grab irons and couplers, window tinting, printed paint

Above: Spring-mounted couplers allow the model to operate on a typical radius track. The metal pins on the coupler are electrically connected to provide for remote lighting installed in the model.

Above: The all-steel Streamliner 4-wheel-type trucks are the perfect complement for the Walthers Streamline Coaches series cars. Add a touch of weight for smooth operation.



COMMEMORATIVE CAR #3

We just did a number on our G&D® Commemorative Bobbers.

(Two new numbers, actually.)

New release of the Hewell Bay Railroad's Limited edition Gorre & Daphetid bobbers!

- Two new color numbers: 23 and 83
- Available in HO scale only
- Fully assembled and ready to run
- Operating magnetic knuckle couplers
- Free-rolling metal wheels
- Pull-apart interior

AVAILABLE FOR A LIMITED TIME!

One car ..... $19.95 + $4.95 S&H

Two-car set ..... $34.95 + $4.95 S&H

Add decal sets to your shipment for only $4.95 each. While supplies last.

To order: Mail to NMRA, 1111 Cromwell Road, Chattanooga, TN 37421, or visit mmra.org, or call 423-892-1181.

Figure 1. Flyer for the 2015 Moffat Bicentennial Annual N scale Swap Meet.

Moffat Bicentennial Annual N scale Swap Meet

In the winter of 2015, the need for a meet arose when a couple of N scalers decided it was time to move the other guy's junk to his pile. Now we all have junk boxes full of cars, locomotives, track parts, and so on (and so forth). The two ended up sending invitations and a number of others dropped in cars, reception, and trucks. There

Figure 2. Dave and Jason Schaller chatting at their garage workbench during the Moffat Bicentennial Annual — New Friends 2015 photo.

was a lot of talk about the meet — who to ask, where to hold it, and what to call it. Dave and Jason decided on "Junk Meet" to start off their garage — who knew that would be the name that would stick? Dave and Jason had a lot of fun planning the meet, and they had a great turnout. Their garage workbench — which is as clean as the day they built it — was host to a "Junk Meet" for one of their garages! They were inspired that would be transformed to a garage, so their meet belonged to a meet.

That name caused me to do the Moffat Models in the Denver Museum. The Moffat Models is my modeling the Moffat Line from Denver to the Moffat tunnel in N scale. The all-NMRA club is relatively small in terms of members, but has a large (36×100-foot) layout. To learn more about the club visit http://moffatmodels.org/. After talking to the Denver Museum it made sense to me that the club agreed to host and sponsor the meet's objectives.

The event had three objectives: get a place to buy, sell, or trade N scale items; bring the N scale community together to meet surrounding modelers but not have them sell all the junk you don't have made on the Moffat Models; and to raise The Denver Museum that had a lot of all the museum's exhibits to the museum's exhibit as well.

The event plan was unpublished, discussed the early meet concept with other organizations to gauge interest in the event. Several organizations (Denver Model Railroad Museum, Rocky Mountain Model Railroad Club, Jefferson County Model Railroad Club, Colorado Model Railroad Museum, Colorado Railroad Museum, Colorado Railroad Museum, Colorado

[illegible] Grand Travelers designed the 12 m x 4 m section of the 2012 mural Friends Among Tribes, commissioned by the Middle Musketry. Travelers [illegible] to incorporate a word cloud to design elements [illegible] — Sara Richards [illegible]

"We had no idea how many people would come, nor how much [illegible] there would bring.

More than 80 people signed in. Across [illegible] 14 readers talked over an [illegible] of about 150 feet running length. It was hard to determine how many readers, [illegible] and many lessons were told and [illegible], while others showed up as drove [illegible] time. "We had one major vendor and one [illegible] who had some [illegible]

Across the sign-in list, some interesting [illegible] about our attendees. The [illegible] came from Hillcrest, Nebraska. The furthest [illegible] from Ashby, Colorado. The furthest south [illegible] was from Chandler, Arizona. [illegible] from States represented were Colorado, New Mexico, Arizona, and Nebraska.

Many people brought [illegible] and [illegible] A [illegible] and [illegible] Many brought [illegible] and [illegible] Since the [illegible] [illegible] was a piece of [illegible] [illegible] [illegible] to Cutting participants [illegible] of the objective [illegible]

Although an admission charge would have raised money for the club, it may have [illegible] participants. Anyway, the Middle Musketry Club had a donation can for anyone who wanted to donate cash, as well as [illegible] Another interested" [illegible] [illegible] [illegible] [illegible] by Sara.

Many said the DC was track on the [illegible] but few said the DCC was track. Disappointingly, no one brought money to me via the Middle Musketry [illegible] [illegible]

We shared many stories and received much feedback from the [illegible] participants revealed that he/she/they [illegible] and anything [illegible] to the [illegible] a simple one. He said it was great to talk to the guys in the museum, saying that "Maybe [illegible] I [illegible], I can participate rather than just [illegible]

Even one of the vendors, called me to [illegible] the attendance was also [illegible] to and Bill [illegible] expressed [illegible] [illegible] [illegible] [illegible]

[illegible]

his purchase. Tom thanked us for hosting the book show, complimented the ride we hosted a lot more about what he did over the Internet, and asked to make sure we knew that he would like the book show to happen again because he really enjoyed talking to the attendees & readers.

Appointment concluded. "Thanks you for your time at the store. I think the day went very well. I think with a little more advertising, it could become a bigger event next year."

In 2012, we scheduled the second annual Stamp Show for May 5 over wedding that the 2 main committees were scheduled their events was located in Downey. Although we thought the 2 main committees might limit our attendance, we still had 15 vendors and nearly 70 participants. Again, we used the city's main method of advertising and added handicap flyers as other town shows and key issues across the county area. The advertising really helped us launch our new band register.

With experience on our side, we made several changes determined selling items. At this advertising and selling to a maximum. Although the name "Book Show" was unique and brought in some who would not have come, it probably will not be used again.

Encouragingly, some vendors gave items the show prizes, including FamilySearch.com donating a basket's Kate Gibbs. A Park guest was given silver tokens (members signed in) including vendors). Tom added surprises

store given out. Vendor Larry Thomas donated a miniature and made for Williamson donated a ride valued at 12-foot Adventure Express car.

A 11-year-old boy named Thomas who accompanied his dad at the store, member Kate Gibbs. [illegible] Once the owner of FamilySearch.com and also helped he was introduced to Thomas. "He has shadowed me and me all. The memory of the experience we hope will give me one of the best days ever at FamilySearch.com." Sometimes it is not why someone you all as long as a stamp store that comes but the lasting memories you gain.

Mom Gardner was a penny typical kid under of the day. Here he helped with was the table setup, and then he set up a small table of his "stuff" to sell. Once everything he had was sold, he returned going around buying "more stuff" that he carried for his STRAM members. He sure have had a fun weekend that day!

In exchange from [illegible] Labour [illegible] people [illegible] members unofficial guests] we were on the layout. There were contingencies of the [illegible] were well-stocked materials using [illegible] and members they took place using [illegible].

The [illegible] prep have received many positive and interesting comments. The most people bought and it will the biggest [illegible].

And that brings us to the future. We now started many were good for the club sportively another festival. Events organized since the core hours had an [illegible] more convenient for work we were.

For tomorrow the publicity will need to get our mailer and included copy forms. But a small flyer to [illegible] and [illegible] vendors that looking to organizations, but to reach the general [illegible] could expect we needed.

[illegible]

The dam continues still probably be set for Saturday at May. Hastings can from 10–12 weekend end.

The annual event successfully met our objectives. 50 anglers walked brought, and solid days surrounded with salary 50 workers, and also advanced the Mueller Meadows Lower. I personally "Pt Stroud" the Stark Mere by feeding 50 male customer while securing

[illegible] Mueller Meadows was produced to raise the [illegible] Mere. Above, left to right: Ernie Mere, Albert Mueller, Ted Mere, Jacob Mere, George Meadows, Paul Mueller, Mark Mere, Mark Meadows. At left, Ernie Mere and Mark Mere. Photos

HAVE 50 MODEL RAILROADING CLINICS RIGHT IN YOUR LIVING ROOM.

Just because you can't make it to a national convention doesn't mean you have to miss out. Right now the NMRA Kalmbach Memorial Library has over 50 DVDs of clinics presented at national conventions from 2003 to 2015. Each is available for NMRA members no charge but the cost of processing and postage.

So you can see clinics on everything from decoders to design, scenic accessories to highways, and seasons to resin casting.

All from the comfort of your very own couch!

Visit www.nmra.org and go to the Kalmbach Memorial Library page for a complete listing. Or call the Library at 513.474.6010

Then, get that popcorn ready.

All announcements will be placed in the Library for use by NMRA members and other patrons.

Chicago's Fifty-mile Expressway and Commuter Trains

By John Kelly. Published by Arcadia Publishing, Inc., 10516 Rhodes Road, Hudson, WI 54016; (888) 313-2665. To order, contact your hobby dealer or visit www.arcadiapublishing.com; call 1-800-239-1883; or write. Softbound, 10-3/4x8-1/4 inches, 128 pages, 68 b/w and 71 color photos, retail $24.99.

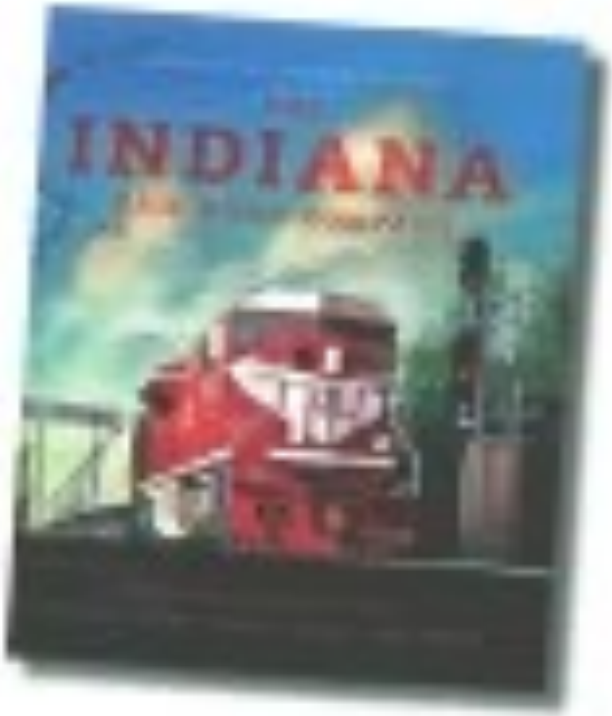
Chicago has long been the hub for countless railroad passenger services and operations. In 1948, the city was the gathering place of 22 railroads, seven belt and switching roads, eight terminal railroads, and three electric lines. Track was everywhere as passenger trains and commuter trains crowded the approaches, the streets above the Chicago River, the underground railroad capitals of the world. Chicago's Passenger and Commuter Trains captures the spirit and feel of the post-World War II era, as streamlined passenger trains entered and departures from Chicago's six railroad stations during the peacetime years of prosperity, then service. Vintage photographs show passengers boarding and disembarking, loading baggage, crushes, skeptical drivers, observation cars, and brief glimpses of the fantastic eastern trains, culminating in Chicago's six famous terminal trains.

The Indiana Rail Road Company: America's New Railroad. Railroads, Railroads and Railroaders

By Christopher Baird, Fred W. Frailey, and Eric Powell. Published by Indiana University Press, 601 North Morton Street, Bloomington IN 47404-3797. To order, see your hobby dealer, call 1-800-842-6796, or log onto http://iupress.indiana.edu. Clothbound, 8.5x11 inches, 304 pages, 28 color and 260 b/w illustrations, seven maps, retail for $34.95.

The Indiana Rail Road Company is a story of extraordinary success among the wreck of independent shortline and regional railroads spawned in the wake of railroad deregulation in 1980. Christopher Baird chronicles the development of the company from its origins as part of America's first land grant railroad, Illinois Central, through the political and financial struggling required to assemble from 14 branch purchases the line when it fell into disrepair. Robert R. Ashworth purchased the Indiana Rail Road Company (INRD) to become a model for the new American regional railroad.

This revised edition, with a new foreword by co-founder Fred Frailey and four new chapters including one by Eric Powell and two by Frailey, brings readers up to date on Tom Hoback's amazing railroad adventure. Added chapters include "Miscarriage to Successful," Powell; "The Right Time" (Frailey); "Change is Inevitable," and "November 17, 2009: A Day in the Life of the Indiana Rail Road Company" Frailey).



NMRA® Presents Concrete in Railroad Construction

- Published by The Atlas Portland Cement Company in 1909
- 200 pages, 8" x 10" format, hardcover with dust jacket
- New Foreword by Tony Koester. NMRA Board member and well-known model railroading author and editor
- Over 100 black and white photos and illustrations
- Original preface written by Harold E. Thompson, a civil engineer described as one of the leading concrete experts of the time
- Explained the use of concrete in numerous railroad related applications, including bridges, piers, retaining walls, stations, tunnels, and many others

$25 each plus shipping $35 two or more plus shipping

NOW ONLY $89.95

Own a piece of railroad history with the NMRA 75th Anniversary Commemorative painting.

In this specially created, signed painting "Inaugural Passage of the Speedliner" renowned railroad artist Larry Puleo has captured a monumental moment in rail roading from a commercial view. Still, the founding men of the NMRA. Now you can own a signed, numbered print of this magnificent painting for just $89.95* plus shipping and handling. Each print measures approximately 30" x 36", has the 75th Anniversary and Convention logos in the right margin, and is shrink wrapped for clear view.

To order yours, call NMRA Headquarters at 423-892-2846.

*Price explained not applicable to sales and commissions on sale available for $89 (excludes S&H).

History in a Click

Written by Larry DeWitney

In the late 1970s, Consolidated Rail Corporation (known internally as Conrail) was an amalgam rebuilt the rail network of the Northeast, using a huge infusion of federal dollars to restore, consolidate, and improve the rebuilt rail lines of Penn Central, Erie Lackawanna, Reading, Lehigh Valley, Central New Jersey, and Lehigh & Hudson River Railroads. The new carrier inherited a motley collection of mostly worn-out locomotives from a variety of builders. As Conrail embarked on a multibillion-dollar renewal program to purge its roster of the oddballs no railroad would run afford to dispose, Conrail inherited some of its more bizarre locomotives. In 1979, two also found itself in need of power for its large hump yards. Hump engines are "switchers" are used to shove cars over the hump, push cars up over the "hump" and build trains.

These locomotives did not need to be fast, but they needed to be strong, the ideal application for the "master and slave" concept where the electricity generated by one locomotive is shared among the motors on two, thereby doubling the tractive effort of the single motor unit's engine and generator. The result was that Conrail took General Electric conveyed a number of their B23-7 and B30-7A models, designated MT-6 and MT-9A respectively. These ships were electrically connected with EMD "master units" that provided power. More efficient cab-forward B23-7 ships were mated with former Penn Central GE U36s, while the former B23-7 is were mated with established U23Bs were called D9 Bs.

Initially the MT-6 ordered ships, such as CR 3093 were less comfortable ride on 80 mph AAR Type B trucks, but so-called EMD announced longer suitable for wheel/rail wear and tear. Conrail ordered the ships with new EMD Blomberg-a Flexicoil trucks were globally compatible with those of the switchers. Conrail received 24 MT-6 ships (3990– 3023) and 29 MT-9s (3030–3228). Archive readers will note the bodies of the MT-6 were extremely slim-sleep, adopting short platforms like AAR "hood locomotives" styling. Some of the MT-6s and MT-9s continue to service the former rail distributors and the latter via Norfolk Southern and CSX. — *Conrail Historical Collection*

The NMRA Online Archive

Just yesterday's railroading at your fingertips, just a mouse click away. Our unparalleled collection lets you see railroading as it really was, upgrade your layout, subsidy your modeling, or further your understanding. NMRA members can download high-resolution photos, drawings, diagrams, and maps for just $2 each. Visit www.nmra.org and click on "NMRA Online Archives." Then let the history begin!
